

# Single Doc - Flow V2

## Overview

This flow type has the least user dropout and maximum success. When using this flow, the user is only required to capture one photo ID. The verification process's duration depends on the user's aptitude and the document image quality.

### 👍 V5.1 Feature:

- In V5.1 and later, you can accept or exclude specific ID document variants (for example, U.S. REAL ID driver's licenses or UK overseas passports). See Accepted Documents.

## User Flow

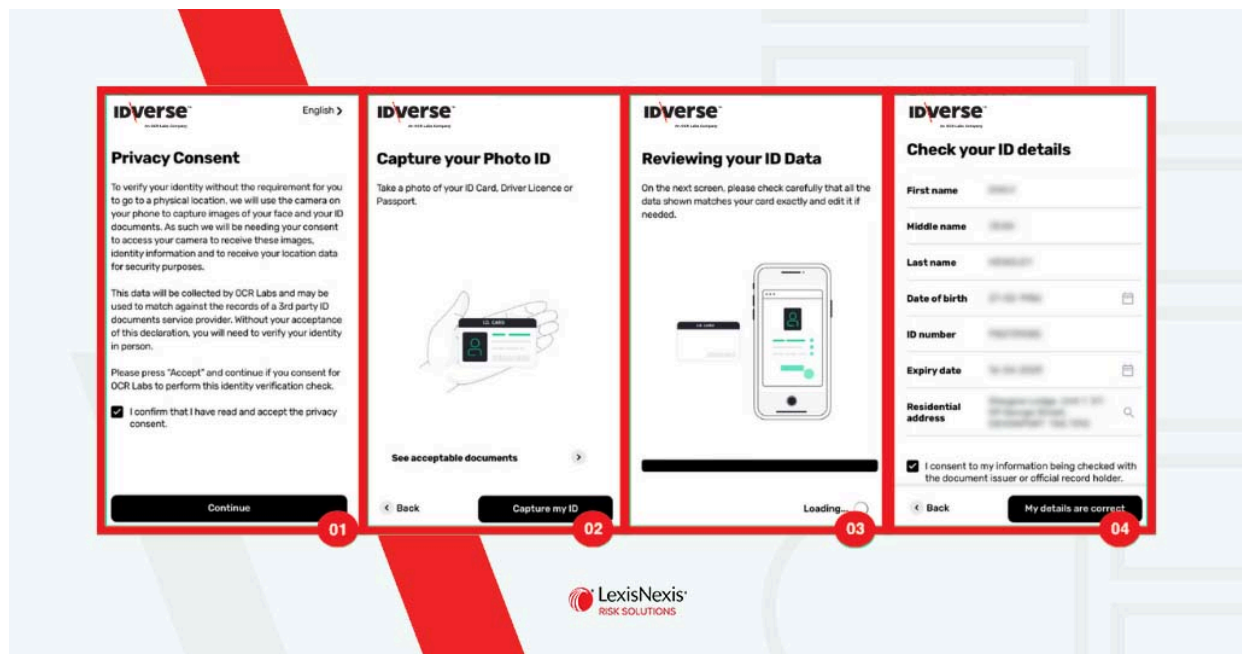

1. Before proceeding, the user must carefully review the customized terms and conditions and provide their consent. At this stage, the user can also choose their preferred language for the verification process.

- You can customize the Welcome Screen for each channel with configurable content. Learn more [here](#).

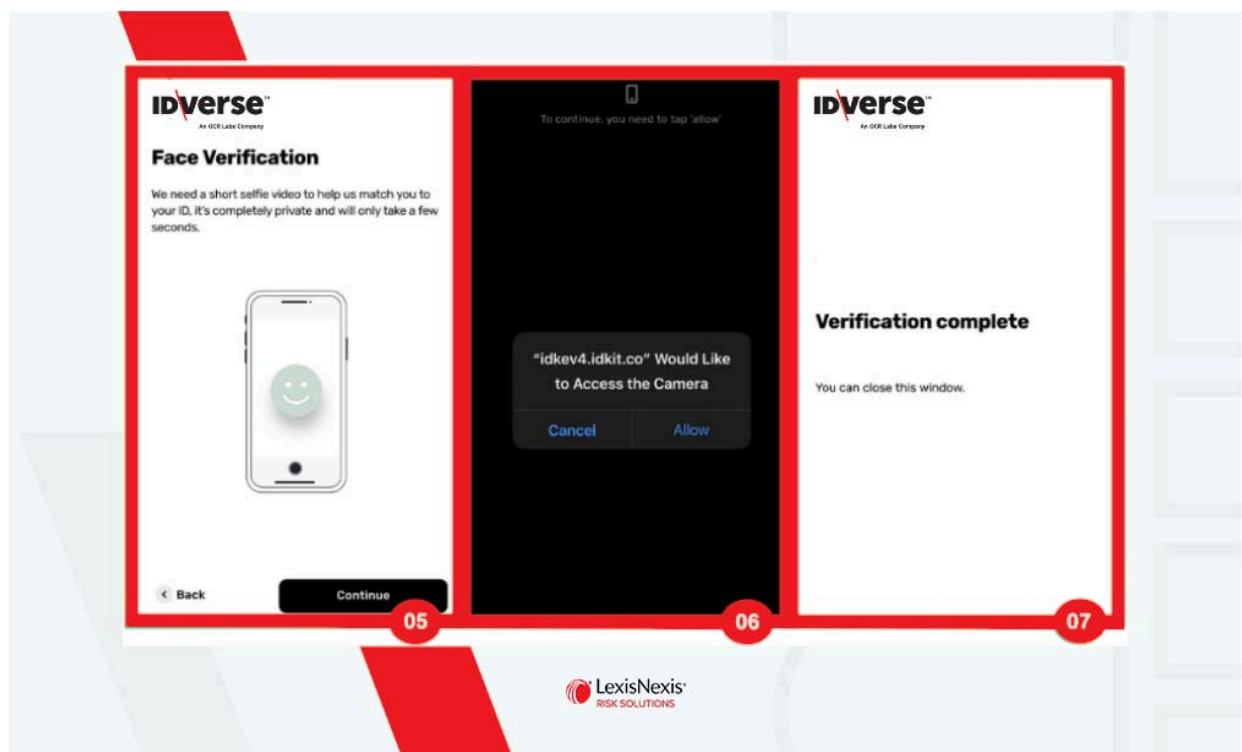

2. The user captures the ID document by clicking the **Capture My ID** button.

- Users can review the accepted documents and countries prior to capturing their document.

3. The user is prompted to review the ID data on the next screen.
4. They review and confirm whether the extracted information is correct. The user cannot edit more than three fields. If they do, they will be asked to recapture their ID.

5. The user can review the capture tips to perform the liveness attempt and have to provide consent to access the camera.
6. The verification is complete.

## We Are Here to Help!

If you encounter an issue, find a bug, or require assistance, please contact our **Support Desk** to find the solution. Don't forget to provide all the critical information about the issue.
